

## 2001 - 2007 Toyota Hilander Clock Fuse Info

Before you remove the Hilander Clock, please check to be sure that the fuse controlling the clock module is OK.

Does the [climate control](#) light up? If not then in the under hood fuse box (left of drivers side) check the ECU-B fuse should be 7.5 amp. Check the heater fuse in the fuse box inside the [car](#) it should be 15 amp. If the fuses are OK and only the clock is bad.
